**FORMER ENERSYS SENIOR SALES ENGINEER
JOINS AKER WADE**

Charlottesville, VA., December 4, 2006 – Aker Wade Power Technologies is pleased to announce that Dan Walker, former Senior Sales Engineer with EnerSys, has joined its sales team to oversee the Central Region. While with EnerSys, Dan has been Salesman of the Year and a member of the President’s Club, increasing sales volume over 300% in 7 years. In his more than 20 years in the motive power battery industry, Dan has developed new customers and dealer representatives for major Chicago-area and national accounts. He began as a field service technician, trained in industrial battery & charger troubleshooting, preventative maintenance and repair. Dan brings expertise in application recommendations, aftermarket services and training, as well as in custom design, installation and repair of industrial materials handling equipment..

Aker Wade distributes advanced fast charging systems across North America through its partner EnerSys, Inc. The partnership with EnerSys has generated a volume of sales activity that requires Aker Wade to add experienced regional managers to support the EnerSys applications engineers and the end customers.

Kevin Burke, VP of Sales for Aker Wade, was pleased to say “We are fortunate to have Dan’s 20+ years’ of experience in the materials handling industry. His technical proficiency will add valued support to our expanding customer base, and his deep knowledge of motive power will be invaluable in the development of new fast charging systems.”

Dan also noted “As costs for manpower, materials and energy continue to rise beyond expectations, finding the most efficient solution for your motive power needs has become more important than ever. Express fast charging makes use of the latest technologies available in battery and charger manufacture, and results in the most efficient transfer of power ever offered. Most other advances in past years have been mere changes to platforms of technology more than 30 years old; in contrast, the unique Express system not only utilizes a new, patented platform, it is also coupled with the latest in data management
